

PRODUCT CATALOGUE

Your specialist in welded
stainless steel tubular products

A close-up photograph of a welder wearing a blue protective suit and a blue and yellow helmet. The welder is using a welding torch to work on a stainless steel tubular product. The scene is illuminated by a bright blue light, likely from the welding process. The background is blurred, showing an industrial setting.

Always at your service providing
innovative, quality-based solutions
for your needs

“Our business decisions are taken in compliance with the highest ethical standards. We strive to achieve sustainable growth, always applying best practices and technologies to preserve the environment, the health and safety of our personnel and contractors as well as to constantly improve the quality of our products and services.”

Andrea Gatti, CEO

Our specialization gives your business a competitive edge

At OSTP we understand that specialization leads to improved product quality, productivity and production efficiencies. That's why we focus fundamentally on the production of welded stainless steel and higher alloy tubular products; that is pipes, tubes, butt weld fittings and fabrications.

Our specialization gives us the best opportunity to embrace the latest technologies and best practices. This keeps our business competitive whilst ensuring the highest product quality standards are maintained.

As a major player in both the European and global markets our welded pressure corrosion piping products and fabrications support applications and installations in the key industry sectors of Pulp & Paper, Oil & Gas, Chemical & Petrochemical, Water & Waste Water Treatment, Desalination, Chemical Tankers, Transportation, Energy, Building & Construction and Mining.

Our customers range from distributors and package builders to EPC contractors and end-users. Our business model and manufacturing base is structured to service both commodity product business and specialist project needs, including design and fabrication of fully engineered products, equipment and solutions.

We are dedicated to helping our customers with the products and services they require and delivering these with the highest priority on safety and reliable quality. Through one of the widest product and grade ranges available from any single producer and providing customers with application engineering, technical support and product development services we provide customers with a competitive business edge.

OSTP key facts:

- Product offerings: Process Pipes & Tubes, LOD Pipes, Butt Weld Fittings and Process Equipment.
- OSTP has two main manufacturing units, one in Sweden and one in Finland.
- OSTP employs around 460 people supported by dedicated local sales resources in ten countries, plus agents in selected markets.
- Our installed welded pipe and tube production capacity is approximately 56,000 tonnes complemented with a further 10,000 tonnes of welded butt weld fittings capacity.
- OSTP is a joint-venture company between Tubinoxia, a wholly owned Gatti family company, holding the majority, and Outokumpu EMEA Oy.

We provide
the solutions
to your needs

“At OSTP we target to fulfill our customer needs with trusted and reliable product quality, skilled local sales and technical support, fast and efficient service solutions both from extensive mill stocks and a comprehensive production program.”

*David Garrett, Head of Sales and Marketing and Product Manager
Process Pipes and Heat Exchanger Tubes*

“OSTP has almost a century of metal forming and welding experience.”

Operational excellence

OSTP focuses on providing world class quality based welded stainless steel process pipe and butt weld fittings. With production units based in Sweden and Finland, dedicated local sales resources in ten countries and agents in selected markets, combined with modern, cost efficient production lines. We are always close at hand with solutions to your needs.

In addition OSTP provides clients with access to skilled application engineering support and product development engineering, drawing on our extensive knowledge and experience in production and use of welded stainless steel tubes and fittings.

Product standards

Product standards

Welded tubes and pipes

Europe

EN 10217-7

Welded steel tubes for pressure purposes.
Technical Delivery Conditions – Part 7: Stainless Steel Tubes.

The standard prescribes 100% non-destructive testing. This gives a design utilization of 100%, and a weld factor $z = 1.0$. Heat treatment may be omitted if agreed. The standard inspection is normally in accordance with EN 10204 3.1. OSTP tubes manufactured according to this standard, can be used in all PED categories. The standard has two test classes, Test Class 1 (TC1) and Test Class 2 (TC2). TC1 is the conventional test class, TC2 is used when specific requirements are demanded.

EN 10296-2

Welded circular steel tubes for mechanical and general engineering purposes.
Technical Delivery Conditions – Part 2: Stainless Steel Tubes.

Non-destructive testing of the weld is not mandatory. This gives a possible design utilization of 70%, and a weld factor $z = 0.7$. Heat treatment may be omitted if agreed. The standard inspection is normally in accordance with EN 10204 3.1. See additional information on page 71.

USA

Welded pipes

ASTM A 312/A 312M

(M means mm dimension)

Seamless and welded Austenitic stainless steel pipe.

This standard contains analysis regulations and strength requirements. In addition, certain regulations of ASTM A 999 apply as regards inspection and tolerances. The scope of the sampling inspection to be carried out in respect of technological inspection is stated. Hydrostatic or Eddy Current testing is to be carried out as a 100% inspection. Welding is to be without filler material and the pipes are to be heat treated. This gives joint quality factor 0.8.

ASTM A 358/A 358M

Electric-fusion-welded Austenitic chromium-nickel alloy steel pipe for high temperature service.

Pipes are welded with filler material and are sub-classified in categories 1–5, see below.

1.3.1 *Class 1* – Pipe shall be double welded by processes employing filler metal in all passes and shall be completely radiographed.

1.3.2 *Class 2* – Pipe shall be double welded by processes employing filler metal in all passes. No radiography is required.

1.3.3 *Class 3* – Pipe shall be single welded by processes employing filler metal in all passes and shall be completely radiographed.

1.3.4 *Class 4* – Same as Class 3 except that the weld pass exposed to the inside pipe surface may be made without the addition of filler metal (see 6.2.2.1 and 6.2.2.2).

1.3.5 *Class 5* – Pipe shall be double welded by processes employing filler metal in all passes and shall be spot radiographed.

ASTM A 790/A 790 M

Seamless and welded Ferritic/Austenitic stainless steel pipes.

This standard is similar to ASTM A 312, but intended for Duplex grades.

ASTM A 928/A 928M

Ferritic/Austenitic (Duplex) stainless steel pipe electric-fusion-welded with addition of filler metal.

This standard is similar to ASTM A 358, but intended for Duplex grades. Pipes are welded with filler material and are sub-classified in categories 1-5, see below.

1.3.1 *Class 1* – Pipe shall be double welded by processes employing filler metal in all passes and shall be completely radiographed.

1.3.2 *Class 2* – Pipe shall be double welded by processes employing filler metal in all passes. No radiography is required.

1.3.3 *Class 3* – Pipe shall be single welded by processes employing filler metal in all passes and shall be completely radiographed.

1.3.4 *Class 4* – Same as Class 3 except that the weld pass exposed to the inside pipe surface may be made without the addition of filler metal (see 6.2.2.1 and 6.2.2.2).

1.3.5 *Class 5* – Pipe shall be double welded by processes employing filler metal in all passes and shall be spot radiographed.

Welded tubes

ASTM A 249

Welded Austenitic steel boiler, superheater, heat-exchanger and condenser tubes.

ASTM A 269

Seamless and welded Austenitic stainless steel tubing for general service.

ASTM A 789

Seamless and welded Ferritic/Austenitic stainless steel tubing for general service.

ASTM 778

Welded unannealed stainless steel tubular products.

Butt weld fittings

Europe

EN 10253-3

Butt-welding pipe fittings. Wrought Austenitic and Austenitic-Ferritic (Duplex) stainless steels without specific inspection requirements. See additional information on page 71.

EN 10253-4

Butt-welding pipe fittings. Wrought Austenitic and Austenitic-Ferritic (Duplex) stainless steels with specific inspection requirements. See additional information on page 71.

OSTP deliver normally Type A fittings as standard. Fittings of Type A have the same wall thickness at the welding ends and in the body of the fitting. Their resistance to internal pressure is less than of a straight pipe with the same dimensions and of the same steel grade. Fittings of Type B have increased wall thickness in the body of the fitting. They will, in general, withstand the same internal pressure as a straight pipe with the same dimensions and of the same steel grade.

USA

ASTM A 774

As-welded wrought Austenitic stainless steel fittings for general corrosive service at low and moderate temperatures.

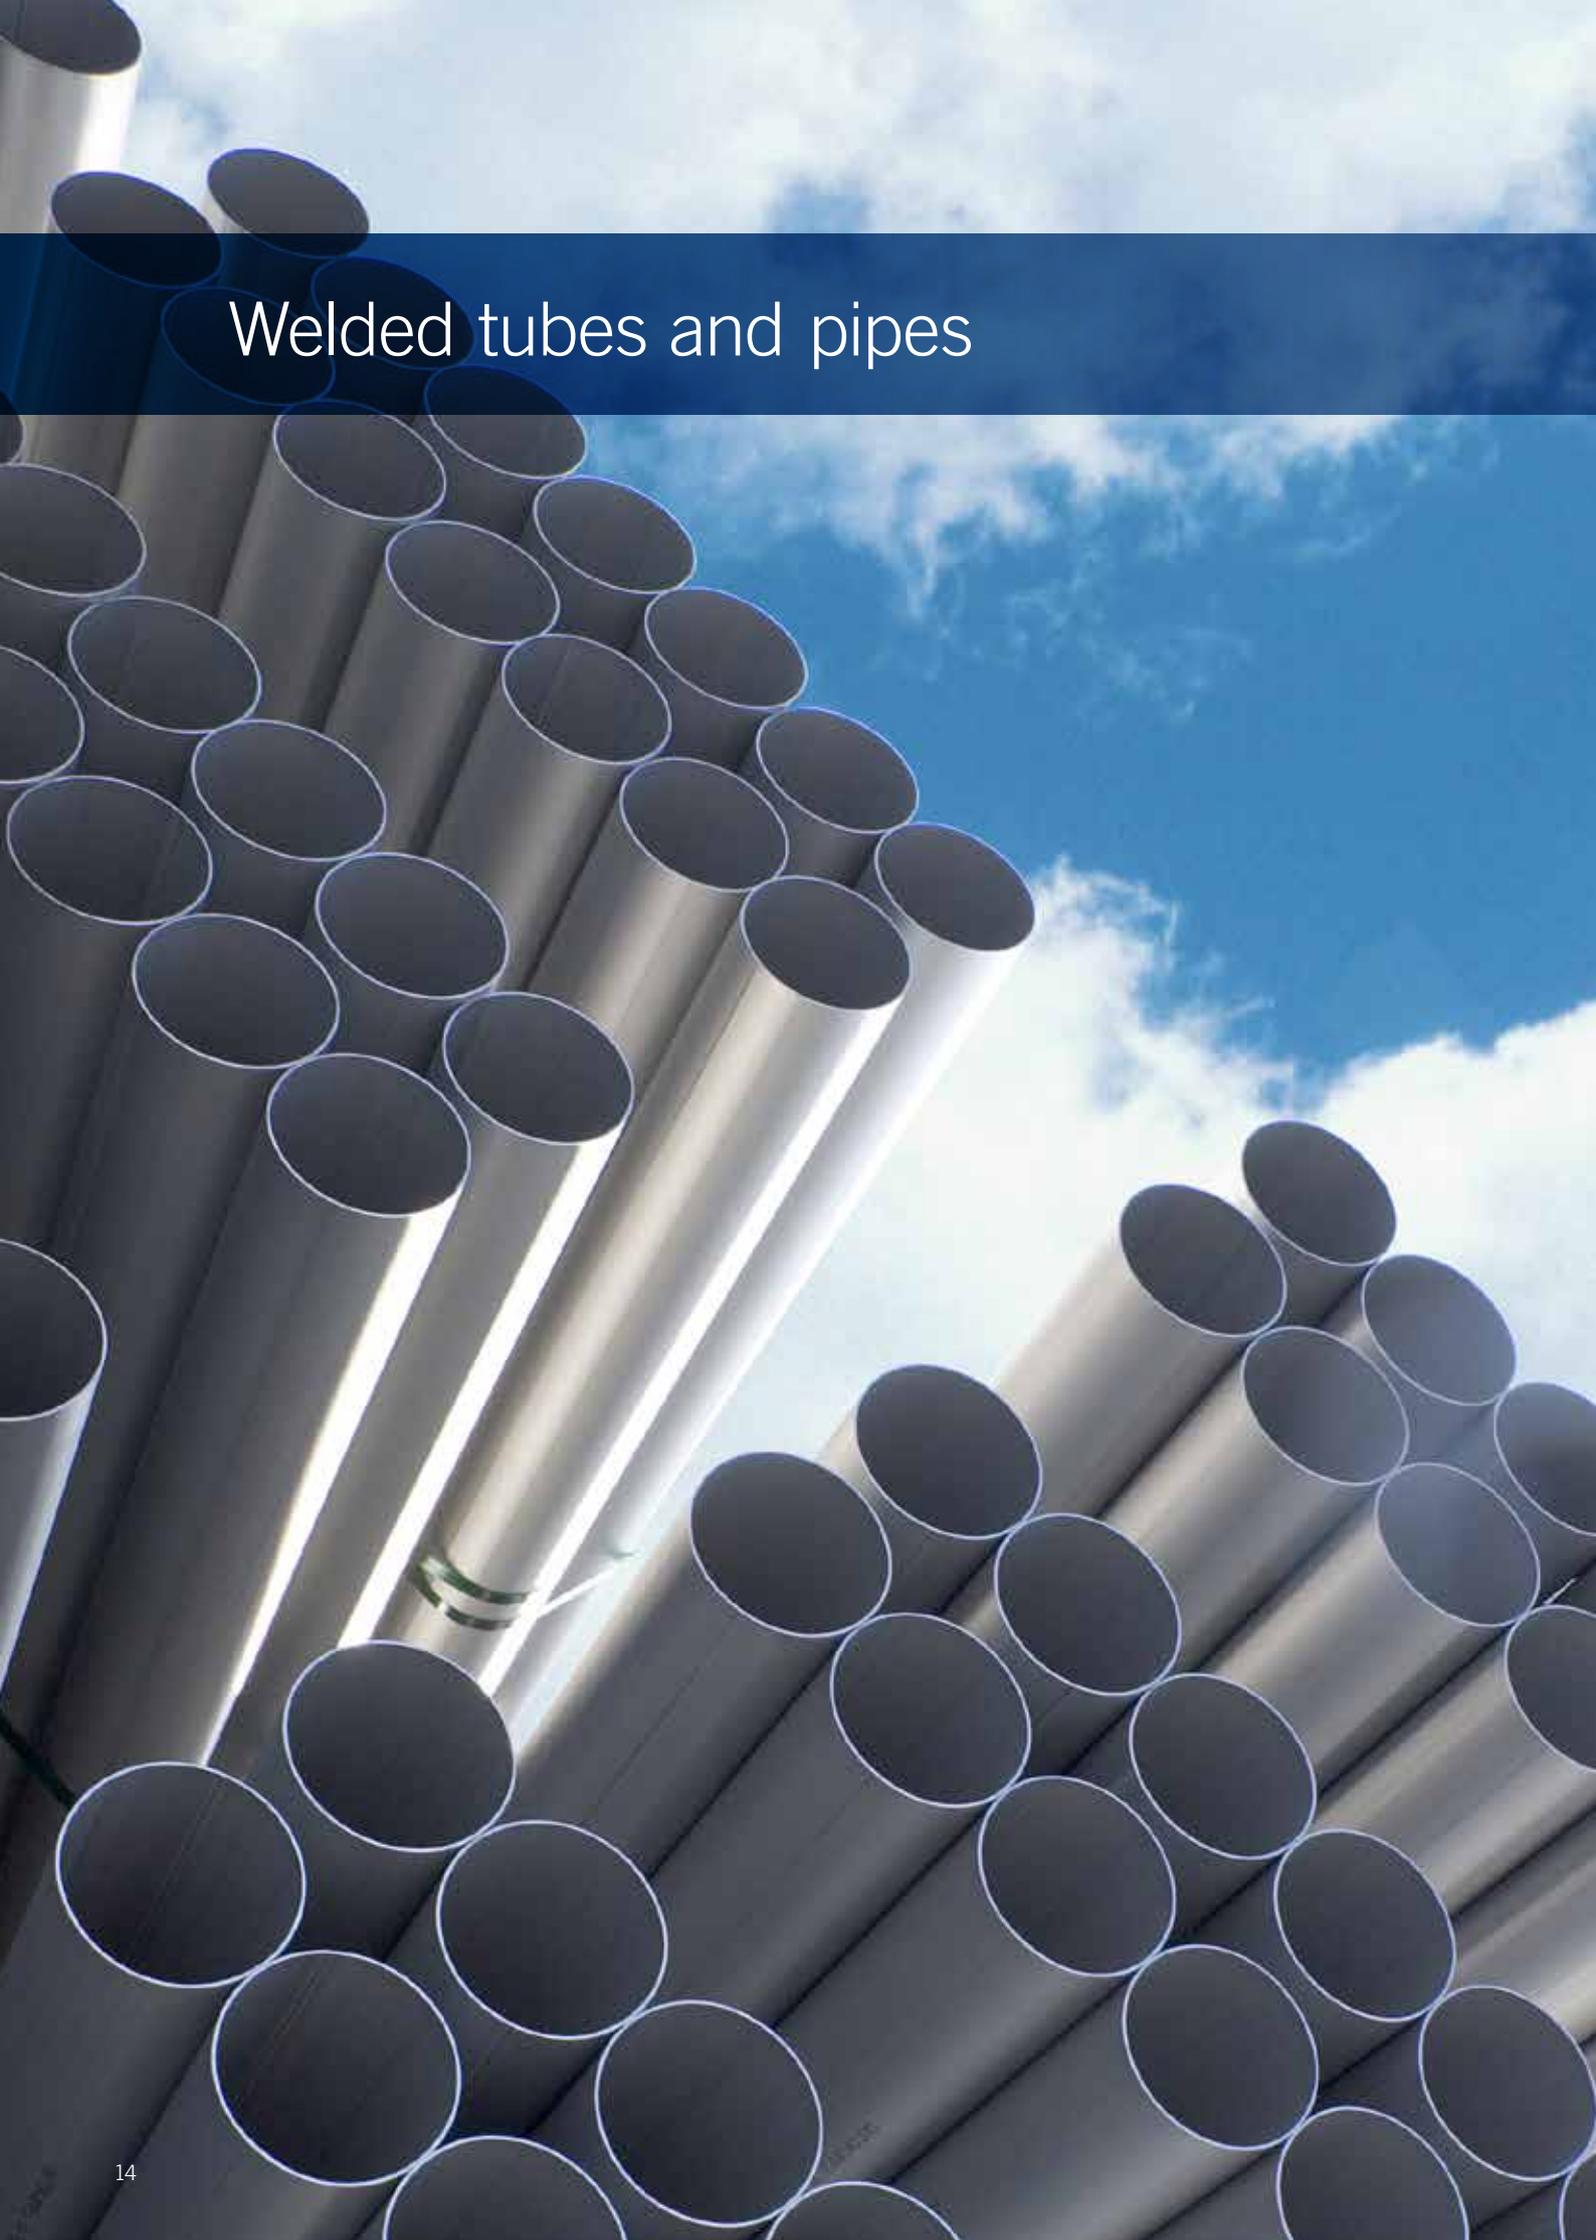

ASTM A 403

Wrought Austenitic stainless steel piping fittings.

ASTM A 815

Wrought Ferritic, Duplex, martensitic stainless steel piping fittings.

Welded tubes and pipes

Welded tubes and pipes

The manufacturing, distribution and sales of welded stainless steel process pipes and heat exchanger tubes, require that the customers' needs regarding the safe conveyance of corrosive, flammable and toxic fluids and gases must be fulfilled. OSTP's pipe and tube production is centered on our Jakobstad site in Finland and from here we offer both from production and our extensive stock program articles for all types of applications within the process industries.

We have total control through all processes in manufacture and inspection, with in-line production of the highest technology. We operate an EHSQ Management System in accordance with ISO 9001, ISO 14001 and OHSAS 18001.

Our plants are approved to European Pressure Equipment Directive 2014/68/EU (PED) and are certified by TUV Nord to AD 2000-Merkblatt W0, which fulfills the highest quality requirements from our customers. Our welding operators and processes for pipe production are also able to release material in accordance with ASTM/ASME.

Our stock program together with world-wide supply capabilities secures a high availability and fast delivery service for any application. If thin or thick, big or small, long or short, corrosion-, acid- or heat resistant, in different applications, OSTP always has the right solution for your needs.

Process pipes

This type of piping is used primarily in the Pulp and Paper, Chemical and Petrochemical industries. Pipes in chemical tankers, and for handling of water such as in pipelines, Water & Waste Water Treatment (W & WWT) plants and desalination plants, are yet other important applicational areas for these products. We stock a wide range of pipes in three primary process pipe systems, ISO, ANSI and Metric Tru-Bore®.

Standard stock range

	ANSI A312, A358	Metric Tru-Bore® EN 10217-7, EN 10296-2	ISO EN 10217-7, EN 10296-2
OD	1/2" - 16" NB	18 mm - 808 mm	17.2 mm - 813 mm
WT	SCH 5S - SCH 40S	1.5 mm - 4 mm	1.6 mm - 4 mm

Production range

OD: 16 - 2032 mm
Wall thickness: up to 10mm

Steel grade range

Austenitic / High-performance Austenitic / Lean Duplex / Duplex / Super Duplex and High-temperature grades and Ferritic grades.

Surfaces

Tubes and pipes can be manufactured from strip or plate with different types of surface finishes which in addition can be influenced within one pre-material type also by thickness and grade.

The surface of the pre-material significantly influences the surface roughness of the final tube (given no further surface treatment like grinding / polishing / brushing etc). The surface finish is defined according to EN 10028-7:2016 Table 6, see below.

Table 6 – Type of process route of sheet, plate and strip*

	Code**	Type of treatment	Surface finish	Notes
Hot rolled	1E	Hot rolled, heat treated, mechanically descaled	Free of scale	The type of mechanical descaling, e.g. coarse grinding or shot blasting, depends on the steel grade and the product, and is left to the manufacturer's discretion, unless otherwise agreed.
	1D	Hot rolled, heat treated, pickled	Free of scale	Usually standard for most steel types to ensure good corrosion resistance; also common finish for further processing. It is permissible for grinding marks to be present. Not as smooth as 2D or 2B.
Cold rolled	2E	Cold rolled, heat treated, mechanically descaled	Free of scale	Usually applied to steels with a scale which is very resistant to pickling solutions. May be followed by pickling. Different methods of mechanical descaling may be used. Shot blasting will result in a rough and dull surface while brushing may result in a smooth surface.
	2D	Cold rolled, heat treated, pickled	Smooth	Finish for good ductility, but not as smooth as 2B or 2R.
	2B	Cold rolled, heat treated, pickled, skin passed	Smoother than 2D	Most common finish for most steel types to ensure good corrosion resistance, smoothness and flatness. Also common finish for further processing. Tension levelling may be used as an alternative to skin passing.
	2R	Cold rolled, bright annealed***	Smooth, bright, reflective	Smoother and brighter than 2B. Also common finish for further processing.

*) Not all process routes and surface finishes are available for all steels.

**) First digit, 1 = hot rolled, 2 = cold rolled.

***) May be skin passed.

By experience we know approximately what surface roughness the coil material has before we start forming the coil into a tube that is welded. The welding method and amount of bead working influence the surface roughness of the weld. Process pipes with wall thicknesses less than 2 mm are normally produced from cold rolled strip. The surface condition on the coil material these tubes are produced from is mainly 2D or 2E (brushed), depending on the grade, and have Ra-values of around 1.5 µm.

Process pipes with wall thicknesses 2-6 mm are generally produced from cold rolled strip descaled with shot blasting and then pickled (2E). These tubes have Ra-values between 2.0-5.0 µm. Process pipes with wall thickness above 6 mm are generally produced from hot rolled plate that has a Ra-roughness around 5 µm.

Surface roughness of strip, sheet and plate materials used for tubes and pipes

Product	Code	Ra µm	Tubular product
Cold rolled, pickled	2D	≤ 1.5	Pipe and heat exchanger tubes. < 2 mm wall
Cold rolled, shot blast, pickled	2E	2.0 - 5.0	Pipe and heat exchanger tubes. 2 - 6.35 mm wall
Hot rolled, pickled	1D	3.5 - 5.0	Pipe > 6.35 mm wall

Note that even if the Ra-value is the most common way to describe the roughness it is not always the most accurate. For example, a ground surface with an Ra-value of 0.8 µm does not look as shiny as an electro polished surface with Ra-value 0.8 µm.

The following pages list data for tubes and pipes and butt weld fittings, giving guidance regarding design pressures for common OSTP tubular products and steel grades. The values should be regarded as rough indications only. Dimensioning of pipe systems is also dependant on external forces, thermal stress, static weight etc. Pipe systems with elbows, flanges, fastening, require often more detailed calculations.

OSTP will not be held responsible for any loss or damage caused by using this information!

Maximum allowable working pressure at 20°C, according to EN 13480

Welded pipe from OSTP

Grades 1.4306 and 1.4307 (listed values)

For grades 1.4404, 1.4432, 1.4435, 1.4438, 1.4539 and 1.4571 multiply “bar-value” with 1.08. To give guidance ratings.

The table shows our production programme within the EN ISO 1127 standard.

Selected ISO-dimensions are stocked in following grades: EN 1.4307, 1.4404, 1.4432, 1.4541 and 1.4571. See tables on following pages.

DN 15 - DN 500 in accordance with EN 10217-7. Max. wall thickness T=6.0 mm. DN 125 - DN 1200 in accordance with EN 10296-2 produced from plate.

NOTE: The pressure calculations in this table have been done according to 13480-3 and EN 10217-7 for DN 15 - DN 500, $T_{max} = 6$ mm, the steel grade is EN 1.4307, room temperature 20 °C.

Pressure values in orange are calculated according to 13480-3 and EN 10296-2 weld factor z=0.7, the steel grade is EN 1.4307, room temperature 20 °C.

The table shows our production programme within the EN ISO 1127 standard.

Selected ISO-dimensions are stocked in following grades: EN 1.4307, 1.4404, 1.4432, 1.4541 and 1.4571. See tables on following pages.

DN 15 - DN 500 in accordance with EN 10217-7. Max. wall thickness T=6.0 mm. DN 125 - DN 1200 in accordance with EN 10296-2 produced from plate.

NOTE: The pressure calculations in this table have been done according to 13480-3 and EN 10217-7 for DN 15 - DN 500, $T_{max} = 6$ mm, the steel grade is EN 1.4307, room temperature 20 °C.

Pressure values in orange are calculated according to 13480-3 and EN 10296-2 weld factor $z=0.7$, the steel grade is EN 1.4307, room temperature 20 °C.

EN ISO 1127

Outside diameter D	Tolerance on outside diameter D		Tolerance on wall thickness T	
	Tolerance class	Permissible deviation	Tolerance class	Permissible deviation
D≤168.3	D3	± 0.75% or ± 0.3 mm whichever is the greater	T3	± 10% or ± 0.2 mm whichever is the greater
	D4*	± 0.5% or ± 0.1 mm whichever is the greater		
D>168.3	D2	± 1.0%		

*) Option 20: Tolerance class D4 if specified (at extra cost).

Standard stock program

The tables below reflect the OSTP standard stock program only, other dimensions and grades are available against special production according to our manufacturing range and capabilities.

Please refer enquiries to mill customer service contacts for review and quotation.

ISO tubes - HT (design pressures shown in brackets)

Welded tubes, annealed and pickled.

In 6 m random lengths, PE (Plain Ends).

Manufactured and inspected according to EN 10217-7 TC1, weld factor $z = 1.0$.

Tolerances in accordance with EN ISO 1127 (OD ≤ 168.3 mm = D3/T3 and OD > 168.3 mm = D2/T3).

Stock standard dimensions and grades in the table below are marked with design pressures.

The design pressures are calculated in bar according to: EN 13480, EN 10217-7, grade, T = 20 °C, weld factor $z = 1.0$.

The stock standard program is subject to change without prior notice!

ISO tubes - NHT (design pressures shown in brackets)

Welded tubes, pickled.

In 6 m random lengths, PE (Plain Ends).

OD ≤ 813 mm manufactured and inspected according to EN 10217-7 TC1, weld factor z = 1.0.

Tolerances in accordance with EN ISO 1127 (OD ≤ 168.3 mm = D3/T3 and OD > 168.3 mm = D2/T3).

Stock standard dimensions and grades in the table below are marked with design pressures.

The design pressures are calculated in bar according to: EN 13480, EN 10217-7 or EN 10296-2, T = 20 °C, actual weld factor z.

Selected Metric Tru-Bore®-dimensions are stocked in following grades: EN 1.4307, 1.4404, 1.4432 and 1.4571. See tables on following pages.

DN 15 - DN 800 in accordance with EN 10217-7. Max. wall thickness T = 6.0 mm. DN 125 - DN 1600 in accordance with EN 10296-2 produced from plate.

Dimensions 44.5, 57, 63.5 and 70 are ISO dimensions.

NOTE: The pressure calculations in this table have been done according to 13480-3 and EN 10217-7 for DN 15 - DN 500, $T_{max} = 6$ mm, the steel grade is EN 1.4307, room temperature 20 °C.

Pressure values in orange are calculated according to 13480-3 and EN 10296-2 for DN 450, DN 600 - DN 1200, the steel grade is EN 1.4307, room temperature 20 °C.

The stock standard program is subject to change without prior notice!

Standard stock program

The tables below reflect the standard OSTP stock program only, other dimensions and grades are available against special production according to our manufacturing range and capabilities.

Please refer enquiries to mill customer service contacts for review and quotation.

Metric Tru-Bore® - NHT (design pressures shown in brackets)

Welded tubes, pickled.

In 6 m random lengths, PE (Plain Ends).

OD ≤ 808 mm manufactured and inspected according to EN 10217-7 TC1, weld factor z = 1.0.

Tolerances in accordance with EN ISO 1127 (OD ≤ 156 mm = D3/T3 and OD > 203 mm = D2/T3).

Stock standard dimensions and grades in the table below are marked with design pressures.

The design pressures are calculated in bar according to: EN 13480, EN 10217-7 or EN 10296-2, T = 20 °C, actual weld factor z.

ANSI/ASME B36.19M

Stainless steel pipe NPS 1/8"– 30". Schedule 5S, 10S, 40S and 80S. Nominal diameters, wall thicknesses and wall thickness tolerances. The schedule numbers (e.g. 40) indicate different wall thickness series.

The letter "S" in the designation stands for stainless material.

As ANSI/ASME B36.19M is not complete, the standard for carbon steel tubes ASME B36.10M is used as a complement for stainless tubes. In this standard there is no "S" after the schedule figure. The sizes are stated in the following standard published by the American National Standards Institute.

ASME B36.10M

Welded and Seamless wrought steel pipe NPS 1/8"– 80". Schedule 10–160. Nominal diameters, wall thicknesses and weight per length unit.

The ANSI system is a national system that is applied throughout the world, and particularly in certain industries and areas and especially within the petrochemical and offshore sectors.

Standard stock program

The tables below reflect the standard OSTP stock program only, other dimensions and grades are available against special production according to our manufacturing range and capabilities.

Please refer enquiries to mill customer service contacts for review and quotation.

ANSI pipes - Standard grades (design pressures shown in brackets)

Welded pipes, annealed and pickled.

In 6 m random lengths, PE (BE as an additional option).

Sizes < 18"NB 100% ET tested in lieu of hydrostatic test.

18"NB and over hydrostatic tested.

Manufactured and inspected according to ASTM A312.

General product requirements and tolerances according to Standard Specification and ASTM A999.

Stock standard dimensions and grades in the table below are marked with design pressures.

The design pressures are calculated in bar according to: ASME B31.3, ASTM A312, grade, T = 38 °C (100 °F), joint quality factor $E_j = 0.8$.

The stock standard program is subject to change without prior notice!

ANSI pipes – Standard grades (design pressures shown in brackets)

Welded pipes, annealed and pickled.

In 6 m random lengths PE (BE as option), all hydrostatic tested.

Manufactured and inspected according to ASTM A358 Class 2.

(Can be upgraded to Class 1 or 5 according to thickness with additional X-raying at extra cost).

General product requirements and tolerances according to Standard Specification and ASTM A999.

Stock standard dimensions and grades in the table below are marked with design pressures.

The design pressures are calculated in bar according to: ASME B31.3, ASTM A358 Class 2, T = 38 °C (100 °F), joint quality factor Ej = 0.85 (higher ratings can be achieved by upgrading to other classes).

OT 153

Heat exchanger tubes

Typical applications are coolers, heaters, evaporators, condensers and recuperators in harsh environments. The tubes are supplied according to defined international standards as well as customer specific specifications in a large variety of steel grades and dimensions. They are made from strips, normally delivered in annealed condition in fixed lengths. Specific requirements on execution, tolerances, lengths, mechanical and corrosion properties are offered on request.

Technical information

Approvals: 2014/68/EU (PED) and AD2000 W0.

Grades: Austenitic / High-performance Austenitic / Lean Duplex / Duplex / Super Duplex and High-temperature grades.

Sizes: Standard metric, imperial, and ISO outside diameters and wall thicknesses in the range:
 Tig welded OD 16 - 133 mm, WT 0.8 - 6.02 mm (depending on grade and D to T ratios) and in max lengths of 12 m, bead cold worked (BCW).
 Laser welded, OD 42.2 - 114.3 mm, WT 0.8 - 4.0 mm (depending on grade and D to T ratios) and in max lengths of 12 meter (no internal bead working, h = 0.15 mm max).

Product standards: AD2000-W2, EN 10217-7, ASTM A 249, A 269, A 789 (according to grade).

WELDED TUBES AND PIPES

First walkwaybridge in LDX 2101® crossing Likholefossen at Gaularfjell in Norway.

Circular hollow sections are used in various industries

- Architecture, Building and Construction
- Machine and process equipment builders
- Decoration
- Automotive and transport

Grades: Austenitic, Duplex and Ferritic Stainless Steel.

Product Standards: EN 10296-2, A312, A358, A778, A790, A928, Mill standards etc.

Tolerances: According to requirements stated in the Product Standards.

Surfaces: As welded, pickled, ground or polished (with the support of external service routes).

Butt weld fittings

Butt weld fittings

Butt weld fittings are manufactured from either tubes, sheet or strip depending on product and dimension.

Our mills in Jakobstad and Örnsköldsvik are approved suppliers to the European Pressure Equipment Directive 2014/68/EU (PED) and certified to AD 2000 Merkblatt W0.

For general use our fittings are delivered with welding factor $z = 0.7$ without special inspection according to EN 10253-3. See additional information on page 71.

For the use in pressure equipment that require welding factor $z = 1.0$ we manufacture fittings with special inspection according to EN 10253-4.

Our stock standard is based on EN 1.4307, 1.4541, 1.4571, 1.4404 and 1.4432 unless other information is given. Other grades may be manufactured on request. If you cannot find what you need in our product range please do not hesitate to contact our sales department. We can offer special products as well.

Tolerances on wall thickness T, according to EN 10253-3/4, symbols described on page 13 in the standard.

Diameter D	Wall thickness T	Permissible deviation	
		Minus	Plus
D ≤ 610	All	- 12.5%	+ 15%
D > 610	≤ 10 mm	- 0.35 mm	+ 15%
	> 10 mm	- 0.50 mm	+ 15%

The pressure ratings for products printed in black are calculated for grade EN 1.4307 at 20°C according to EN 10253-4 type A.
 Pressure values in orange are calculated for grade EN 1.4307 at 20°C according to EN 10253-3 type A. (welding factor Z=0.7)
 All products can with additional testing be delivered to meet EN 10253-4 type A. This has to be confirmed when ordering.
 Note! All tees DN 400-500 are produced from 4 mm plate. All tees DN 600 are produced from 5 mm plate.
 Stock standard items are subject to change without notice.

*) For EC reducers the pressure is appr. 10% lower

The pressure ratings for products printed in black are calculated for grade EN 1.4307 at 20°C according to EN 10253-4 type A.

Pressure values in orange are calculated for grade EN 1.4307 at 20°C according to EN 10253-3 type A. (welding factor Z=0.7)

All products can with additional testing be delivered to meet EN 10253-4 type A. This has to be confirmed when ordering.

We will extend the dimensions up to DN 400 that fulfill EN 10253-4.

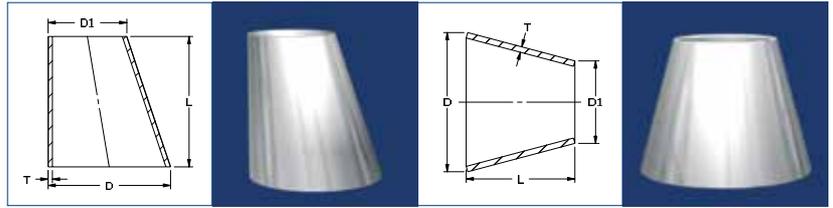

Pressure values in orange have to be multiplied by 1.42 to get the pressure ratings according to EN 10253-4.

Stock standard items are subject to change without notice.

*) For EC reducers the pressure is appr. 10% lower
 The pressure ratings for products printed in green are calculated for grade EN 1.4307 at 20°C according to EN 10253-4 type A.
 The pressure ratings are calculated for grade EN 1.4307 at 20°C according to EN 10253-3 type A. (welding factor Z=0.7)
 All products can with additional testing be delivered to meet EN 10253-4 type A. This has to be confirmed when ordering.
 We will extend the dimensions up to DN 400 that fulfill EN 10253-4.
 Pressure values have to be multiplied by 1.42 to get the pressure ratings according to EN 10253-4.
 Stock standard items are subject to change without notice.

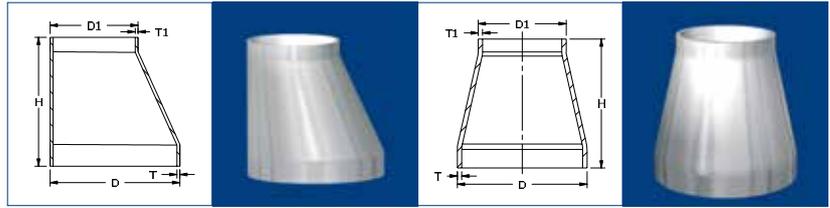

Stock standard: EN 1.4307 and 1.4432

BUTT WELD FITTINGS

Flange joints

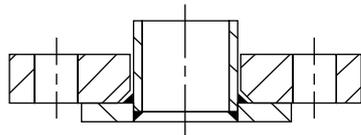

The most common joints are illustrated by the following drawings referring to EN 1092-1. Flange connections according to ASME B 16.9 look similar.

Type 02 and 37 according to EN 1092-1

Loose flange – pressed collar joint

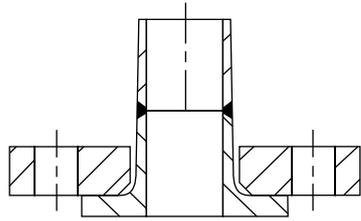

The inside diameter (ID) should be 3-7 mm larger than the outside diameter (OD) of the tube or neck, depending on size.

Type 02 and 32 according to EN 1092-1

Loose flange – weld-on collar plate joint

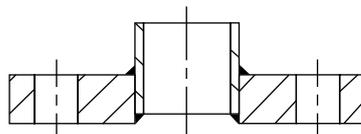

The inside diameter (ID) of the flange should be 3-7 mm larger than the outside diameter (OD) of the tube, depending on size.

Type 02 and 35 according to EN 1092-1

Loose flange – weld-neck collar joint

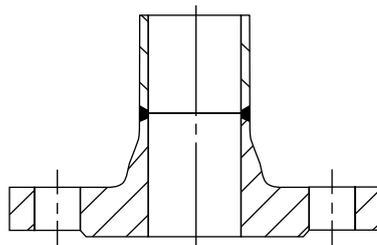

The inside diameter (ID) of the flange should be 3-7 mm larger than the outside diameter (OD) of the stub, depending on size. Stub ends are available in a variety of types. If stub type is specified when ordering, the appropriate ID of the flange can be more easily selected or turned down from standard sizes.

Type 01 according to EN 1092-1

Plate flange for welding – tube joint

The inside diameter (ID) of the flange should be 0.5-2.0 mm larger than the outside diameter (OD) or the tube, depending on size.

Type 11 according to EN 1092-1

Weld-neck flange – tube joint

The relationship between the diameter of the tube and the diameter of the flange is given in the dimension tables.

Miscellaneous

Technical information regarding OSTP products in Pressure Equipment Directive 2014/68/EU (PED) applications

Technical information regarding OSTP products in Pressure Equipment Directive 2014/68/EU (PED) applications

Tubes and fittings produced and supplied by OSTP according to EN 10217-7 and EN 10253-4 respectively are PED-compliant.

As all European OSTP manufacturing & production systems satisfy the requirements of the Pressure Equipment Directive 2014/68/EU (PED), tubes and fittings with joint coefficients of $z=0.7$ and 0.85 , produced and supplied according to EN 10296-2 and EN 10253-3 respectively, also fulfil the PED essential safety requirements, which qualifies them for use in PED category I-IV applications.

It is the responsibility of the equipment designers/manufacturers to ensure that the correct technical products are used for the required applications.

For any further technical queries or additional information, please contact our application engineers.

Tubes and pipes

(Process pipes – HEX – HWP):

- Product Standard (e.g. EN 10217-7, ASTM A 358/A 358M)
- Dimension (OD, WT, Length). For HEX tubes also length tolerances
- Dimensional Standard (ISO, ANSI, Metric Tru-Bore®)
- Steel grade (e.g. EN 1.4404 / TP 316L)
- Quantity (m). For HEX tubes number of tubes. Also quantity tolerances
- Delivery time, address (goods), address (documents), conditions
- Type of Inspection certificate (e.g. 3.1 acc. to EN 10204, 3.2 acc. to EN 10204)
- Type of packing, if different from OSTP mill standard
- Additional options:
 - NHT, HT (Not Heat Treated, Heat Treated)
 - NDT, DT (Non Destructive Testing, Destructive Testing)
 - Weld factor z, joint quality factor Ej
 - End preparation BE (Bevelled Ends)
 - Tolerances (e.g. D4/T3 acc. to EN ISO 1127)
 - Surface condition on raw material (e.g. 2B, 2E, 2D)
 - Sub classes (e.g. ASTM A 358/A 358M Class 3)
 - For HEX tubes details regarding internal weld bead requirements if applicable
 - If it is a Project – Project Name and Application / Segment
 - Etc.

Note! Some options can already be required in the Product Standard.

Butt weld fittings:

- Product type (e.g. elbow, tee, reducer)
- Product Standard (eg. EN 10253-3, EN 10253-4, ASTM A 403/A 403M)
- Dimension (OD, WT)
- Dimensional Standard (ISO, ANSI, Metric Tru-Bore®)
- Steel grade (EN 1.4404 / TP 316L)
- Quantity (pieces)
- Delivery time, address (goods), address (documents), conditions
- Type of Inspection certificate (3.1 acc. to EN 10204, 3.2 acc. to EN 10204 etc.)
- Type of packing if different from OSTP mill standard
- Additional options
 - NHT, HT (Not Heat Treated, Heat Treated)
 - NDT, DT (Non Destructive Testing, Destructive Testing)
 - Welding factor z, joint quality factor Ej
 - End preparation BE (Bevelled Ends)
 - Tolerances (e.g. D4/T3 acc. to EN ISO 1127)
 - Surface condition (e.g. 2B,2D)
 - Sub class (e.g. WP-WX)
 - If it is a Project – Project Name and Application / Segment
 - Etc.

Note! Some options can already be required in the Product Standard.

Circular hollow sections:

- Dimension (e.g. OD 139.7x3 mm)
- Standard length 6 m or fixed lengths
- Product Standard (e.g. EN 10296-2)
- Outside finishes: as welded, pickled, ground or polished
- Steel grade (e.g. EN 1.4404 / TP 316L)
- Quantity (m)
- Delivery time, address (goods), address (documents), conditions
- Type of packing, if different from OSTP mill standard
- Additional options:
 - NDT, DT (e.g. 100% ET)
 - Tolerances (e.g. D3/T3 acc. to EN ISO 1127)
 - If it is a Project – Project Name and Application / Segment
 - Etc.

Contact OSTP customer service for additional information!

4435	1.4435	316L	0.02	17.0	12.5	2.5		2353	1.4435		
4438	1.4438	317L	0.02	18.0	13.0	3.0		2367	1.4438		

The compositions comply with EN, which do not always comply exactly with the old national standards.
Old SS and DIN-designations within brackets specifies a slightly higher Ni-content, that is insignificant for the corrosion resistance.

Selection of a stainless steel grade

Stainless steels are used mainly due to their corrosion resistance, but also thanks to their excellent mechanical properties, formability, weldability and appearance. There are several aspects to consider at material selection before the choice finally can be decided. Earlier experience is an important factor in order to put together a group of candidate materials. The next step is to investigate the availability of the specified product forms, dimensions, standards, minimum quantities etc. when the order is placed, but also the availability for future construction or maintenance. Other factors are cost for material and construction, expected lifetime and approvals.

Corrosion resistance

Stainless steels are resistant thanks to the invisible passive layer consisting of chromium- and iron oxides that forms spontaneously in contact with oxidants. With increasing amounts of Cr the corrosion resistance increases.

Molybdenum (Mo) is an alloy that is added because it has a 3.3 times higher effect than Cr, in order to prevent pitting and crevice corrosion. Nitrogen (N) is also added in the modern developed stainless steels, and its effect on corrosion resistance is 16 times that of Cr. A number calculated from the Pitting Resistance Equivalent PRE indicates the pitting corrosion resistance of an alloy.

$$PRE = \%Cr + 3.3 \times \%Mo + 16 \times \%N$$

Typical composition	Cr	Mo	N	PRE
Cr-Ni	18.0	-		18
Cr-Ni-Mo	17.0	2.1		23
Cr-Ni-2.5Mo	17.0	2.6		25
LDX 2101®	21.5	0.3	0.22	26
2304	23.0	0.3	0.10	26
LDX 2404™	24.0	1.6	0.27	33
2205	22.0	3.1	0.17	35
904L	20.0	4.3	0.06	35
2507	25.0	4.0	0.27	43
254 SMO®	20.0	6.1	0.20	43

Factors influencing the corrosivity

The risk for corrosion attack on stainless steels in waters increases when following parameters increase. For decreasing pH-values below 7 the risk for corrosion increases.

- Temperature °C
- Chloride content ppm Cl⁻
- Oxygen content ppm O₂
- Chlorination ppm ClO₂
- pH-value

Recommended maximum chloride contents (ppm or mg/l)

at different temperatures and normal conditions.

pH = 6-8, O₂ = 4-8 ppm, chlorination <1 ppm.

Temp, °C	Cr-Ni	Cr-Ni-Mo	904 L 2205	254 SMO® 2507
20	400	1000	14500	35000
30	350	750	11500	28000
40	300	600	9500	22000
50	200	450	7500	18000

Stainless steel grades for different waters at ambient temperatures

Drinking water:	4307, 4404, LDX 2101®
Polluted water:	4432, LDX 2101®
Brackish water:	2205
Deaerated seawater:	2205
Fresh seawater, offshore:	254 SMO®, 2507
Desalination SWRO:	254 SMO®, 2507

Design of dimension and grade

Pipe systems have to be designed according to the valid safety and design regulation. In most European countries the Pressure Equipment Directive 2014/68/EU (PED) is mandatory, and in many other countries ASME B31.1 or B31.3 are used. The user is however free to select the dimension standard and grade. Using pipe systems with thinner walls and/or grades with higher strength makes significant weight and cost savings. Pipe systems designed with Metric Tru-Bore® and/or ISO are lighter compared to pipe systems designed with ANSI dimensions. By using thin walled pipe made from any of the high strength Duplex stainless steels, as substitute for the Austenitic standard grades, more cost saving is possible.

Pressure calculation tool is available at www.ostp.biz, select "Products", "Tools" and "Pressure Calculation".

Calculation of loss of pressure due to friction

Stainless steels are not sensitive for high water velocity. Water speeds exceeding 20 m/sec are not a problem. The stainless surface is corrosion resistant and durable, and will remain the same through the years. The friction coefficient can be set to 0.04 for standard pipe products, for fittings the friction coefficient can be set to 0.2–0.4 for a 90° elbow and for a tee to 0.5–3.0.

Our main certifications and approvals

OSTP is proud of its reputation as a reliable supplier and a manufacturer of high quality products. In addition to satisfied customers, the proof of this can be seen in our main quality certifications, listed below:

- Our EHSQ Management Systems are certified by TÜV NORD in accordance with the ISO 9001 (Quality), ISO 14001 (Environment) and OHSAS 18001 (Health & Safety) Standards.
- OSTP is approved according to 2014/68/EU (PED), demonstrating that our quality systems are suitable for the manufacturing of pressure equipment components and for manufacturing components.
- OSTP is certified according to AD2000-W0 by TÜV NORD Systems GmbH.
